

REEL, CREWE EDITION

PRO-STRETCH fabric acoustic wall and ceiling treatment system by **eomac**

eomac became involved with this project in the early design stages. The concept was to introduce LED Lighting into the auditorium to create a soft, warm, glow effect on the auditoria sidewalls. Working from the bear wall, PRO-STRETCH was installed in a stepped design with alternate panels being proud of one another. The space between the two panel planes creates the cavities in which the LEDs are fixed. The effect is very dramatic. Reel Cinemas have continued to incorporate the dynamic design in other cinemas in the UK.
